Magnetite (<30%)</td>
1309-38-2

Styrene/acrylate resin (<20%)</td>
25036-19-5

Wax (<5%)</td>
8015-86-9

Carbon black (<5%)</td>
1333-86-4

Other additives (<5%)</td>

Section II - Emergency and First Aid

Primary Route of Entry:	Symptoms of Overexposure:			
Inhalation	Minimal respiratory tract irritation may occur as with			
Eyes:	exposure to large amounts of any non-toxic dust.			
Flush with water.				
Skin:	Medical Conditions Generally Aggravated by Exposure:			
Wash with soap and water.	None when used as described by product literature.			
Inhalation:				
Remove from exposure.	Additional Information:			
Ingestion:	None.			
Dilute stomach contents with several glasses of milk or water				

Dilute stomach contents with several glasses of milk or water.

Section III - Toxicology and Health Information

The toxicity data noted below is based on the test results of this toner or similar reprographic materials:

Oral LD ₅₀ :	>5 g/kg (rats) practically non-toxic.	TLV:	10 mg/m ³ (inhalable particles)
Dermal LD ₅₀ :	>5 g/kg (rabbits) practically non-toxic.		3 mg/m ³ (respirable particles)
Inhalation LC ₅₀ :	Inhalation LC ₅₀ : >5 mg/l (rats, 4 hr exposure)practically non-toxic.		15 mg/m ³ (total dust)
	>20 mg/l (calculated 1 hr exposure) non-poisonous, DOT.		5 mg/m ³ (respirable dust)
Eye Irritation:	Not an irritant	STEL:	Not established
Skin Sensitization:	Not a sensitizer.	Ceiling:	Not established
Skin Irritation:	Not an irritant	XEL ¹ :	2.5 mg/m^3 (total dust)
Human Patch:	Non-irritating, non-sensitizing		0.4 mg/m^3 (respirable dust)
Mutagenicity:	No mutagenicity detected in Ames assay.		
Carcinogens:	None present		

Aquatic LC₅₀: >1000 mg/l (fathead minnows) non-toxic.

Additional Information: The results obtained from a Xerox sponsored Chronic Toner Inhalation Study demonstrated no lung change in rats for the lowest (1mg/m³) exposure level (the level most relevant to potential human exposure). A very slight degree of fibrosis was noted in 25% of the animals at the middle (4mg/m³) exposure level, while a slight degree of fibrosis was noted in all the animals at the highest (16 mg/m³) exposure level. These findings are attributed to "lung overloading", a generic response to excessive amounts of any dust retained in the lungs for a prolonged period. This study was conducted using a special test toner to comply with EPA testing protocol. The test toner was ten times more respirable than commercially available Xerox toner, and would not be functionally suitable for Xerox equipment.

XEROX Trade Name: Phaser 3100MFP Toner

Section IX- Spill, Leak, and Disposal Procedures						
For Spills or Leakage: Sweep up or vacuum spilled toner and carefully transfer into sealable waste container. Sweep to minimize generation of dust during clean up. If a vacuum is used, the motor must be rated <i>tight</i> . A conductive hose bonded to the machine should be used to reduce static buildup (See V). Residue can be removed with soap and cold water. Garments may be washed or dry-clean removal of loose toner.						
Waste Disposal Method:	State and Local requirements may	vaste according to Federal Regulation 4 y, however, be more restrictive. Consulties for additional information. Incineration	It with the appropriate State
