	Section3 : F	lazards Identification	on	
		Emergenc	y Overview	
HMIS	Health: 1	Flammabilit : 1	Reactivity : 0	PPE:See section 8
		У		
NFPA	Health : 1	Flammabilit : 1 y	Reactivity : 0	
The Most Important Hazards Adverse Human Health Effects : There are no significant hazards expected with intended use. Potential Health Effects Primary Entry Routes : Inhalation ; Yes Skin ; Yes Ingestion ; Yes Environmental Effects : There are no significant hazards expected with intended use.				
There a Specific H	lazards :	hazards expected with		
Dust explosion (like most finely grained organic powders) Main Symptoms : Acute Inhalation Toxicity Exposure to excessive amount of dust may cause physical irritation to respiratory tract. Acute Oral Toxicity				
Low acute toxicity in animal experiment. Acute Eye Irritation May cause slight transient irritation. Acute Skin Irritation May be non-irritant. Sensitization From test no apparent significant hazards are expected . (Only few cases reported on incidental allergy-related conjunctivitis or dermatitis.)				
Chronic Effect Slight pulmonary fibrosis has been reported in rats upon chronic inhalation exposure to a toner at 4mg/m3 every day for 2 years. No pulmonary change was found at 1mg/m3. These findings show that exposure to excessive amounts of powder may cause damage to lungs. However, normal use and handling of this product as intended, does not result in inhalation of excessive amounts of powder.				
 Carcinogenicity Titanium dioxide contained in this product is classified to Group 2B of IARC as the result of inhalation test in use of rat. But oral/skin test does not show carcinogenicity. In the animal experiment with very high concentration of titanium dioxide (excessive burden of rat's lungs clearance mechanism (overload phenomenon)), the rat alone showed lung tumor. Under a normal use practice, the concentration should be far lower than the above; and it is assumed that there is no such use. Also, relation between respiratory disease and work exposure of titanium dioxide is not observed with epidemiological survey. 				

Medical Conditions Aggravated by Exposure Not applicable Classification of the Chemical Product

This mixture is not classified as dangerous.

Section4 : First Aid Measures

Inhalation :

Remove from exposure into fresh air and rinse mouth with water. Seek medical advice. Skin Contact :

Section7 : Handling and Storage

Handling : **Technical Measures/Precautions** Not applicable Safe Handling Advice Do not handle in areas where there is wind or draught, this may cause dust to get into eyes. Avoid breathing in dust. Storage : **Technical Measures** Not applicable Storage Conditions Keep out of reach of children. Store in dry, well-ventilated area, to maintain quality the temperature should not exceed 35degrees centigrade for a long time. Avoid direct sunlight. Carcinogenicity :
In 2008 IARC the re-evaluated Titanium dioxide as a Group 2B carcinogen for which there is
inadequate human evidence, but sufficient animal evidence.
The latter is based upon the development of lung tumors in rats receiving chronic inhalation
exposures to Titanium dioxide at levels that induce particle overload of the lung.
Use of this product, as intended, dose not result in inhalation of excessive dust.
Epidemiological study to date have not revealed any evidence of the relationbetween exposure to
titanium dioxide and diseases of the respiratory tract beyond general effects of dust.
Mutagenicity : Negative (Ames test)
